

8. Write a sentence describing how many of each type of furniture you should build and sell and what is the maximum profit you will make.

In order to make the maximum profit we need to sell 3 computer desks and 12 book cases.

9. Reflective Writing.

Did this project change the way you think about how math can be applied to the real world? Write one paragraph stating what ideas changed and why. If this project did not change the way you think, write how this project gave further evidence to support your existing opinion about applying math. Be specific.

Before completing this project we were all aware of how math is used daily in many occupations. This project however, has shown us another way that math can be used in a business setting. So to answer the question, our views were not changed. our thoughts/opinions were just further verified.
